SUSAN MISSAGLIA

Prior to deciding I wanted to pursue coding as a career, I spent the last ten years leading financial and maintenance teams for a hospital group in Brazil. During this time, I gained a lot of professional experience which I have no doubt will help me to become a successful software engineer. I have always been curious about development and decided to take some additional courses to further my understanding and I haven't looked back since. I am highly determined and extremely committed to pursuing a career in web development and programming.

ABOUT ME

GitHub:
https://github.com/susanmiss

Website:
http://www.susanmissaglia.co.uk

I have been always curious about technology, keen to understand what happens behind the designs we see in websites and what lies beneath every click on an interface.

I decided to change direction within my career to pursue this passion and after completing a web development course, I had no doubt that I wanted to focus my career to working as a developer.

I'm a very dedicated, hardworking, and committed with learning. Also, I have proven expertise in being part of and leading teams.

Outside of work, you can find me travelling, trying different cuisines and playing snooker.
